

BIOGENERAL

BIOGENERAL WATER POLICY

Biogeneral recognizes that water is a vital raw material for our business and a shared natural resource. Water is essential for life and access to safe water and sanitation is a basic human right. Biogeneral strives to demonstrate its role as a responsible steward for water by practicing sustainable management of water resources.

At Biogeneral, we manage the collection and reporting of our water data, set targets and publicly disclose water usage performance. At the same time, we focus on providing reliable water supplies, and apply efficient practices including reuse and recycling of water within the facility.

Biogeneral will review this sustainable water policy from time to time as appropriate and at least once every five years.
